

# BUTTE COUNTY CAMP FIRE REBUILD FLOW-CHART

Revised 06/22/20

- Butte County Contacts**
- ❖ Building 552.3700
  - ❖ Planning 552.3701
  - ❖ Environmental Health 552.3880
  - ❖ Public Works 538.7681
  - ❖ CAL Fire Inspection 538.6226

**NOTICE**  
 All property owners of fire damaged/destroyed structures must participate in one of the two Debris Removal programs – The Flow chart below depicts the steps for either of those programs. Regardless of the program chosen, the owner must also complete the Environmental Health (EH) process for well and septic clearance.

**CAL Recycle – Right of Entry Program**  
 CAL Recycle will contact property owners when the property is scheduled for cleanup

**Alternative Debris Removal Program**  
 Once an alternative work plan has been approved by EH the owners contractor may begin debris removal

Stake out the location of the existing Septic System. When debris clean-up is complete and final documentation is received, Environmental Health (EH) will designate the parcel as “Property Clean-up Complete”, which will authorize issuance of building and septic system repair permits (if necessary)

**Use an existing Septic System**  
 Owner has existing system evaluated by a County certified wastewater professional. A Camp Fire septic inspection form must be completed and turned into EH. County records must show that the septic system was built for the same number of bedrooms proposed for the re-build.

**Construct a new Septic System**  
 Owner applies with EH for a septic replacement permit. The replacement system must be sized for the same number of bedrooms being applied for the rebuild.

Will the structure be served by a Public Water System or Private Well?

Well Water Sampling may be required. This process can be completed by the Owner:  
 ➤ Bacteriological Testing required if well head was damaged or compromised.

Sample results submitted to and approved by EH.
