

Butte County Watershed Model Review

Final Report

March 15, 2004

California Hydrologic Research Laboratory (CHRL)

526 Isla Place Davis, CA 95616

TABLE OF CONTENTS

Table of Contents	i
List of Figures and Tables	ii
Executive Summary	iii
Introduction	1
Watershed Modeling Strategy and Its Prioritized Implementation Plan	4
Workplan for Implementing the Watershed Modeling Strategy	10
Watershed Model Review	12
Groundwater Processes	13
Surface Water Processes	14
Snowmelt	14
Channel Flow	15
Overland Flow	16
Land Use Changes	18
Sediment, Nutrient and Pesticide Transport	19
Interactive Processes	20
Infiltration	20
Channel Seepage	21
Aquifer Recharge	23
Subsurface Stormflow	24
Data Requirements and Management	26
Conclusions	27
References	30

LIST OF FIGURES

- Figure 1. WEHY model's depiction of hillslope surface and subsurface flow processes.
- Figure 2. Schematic description of the domains of sediment, nutrient and pesticide production, deposition and transport processes, as conceptualized in the WEHY model.
- Figure 3. The description of infiltration, unsaturated flow and evapotranspiration processes within WEHY model.
- Figure 4. Schematic illustrating (a) stream flow with groundwater seepage to channel, (b) stream flow with seepage from channel to groundwater, and (c) stream flow with seepage to unsaturated zone between channel and groundwater.
- Figure 5. Unconfined and confined groundwater recharge processes, as conceptualized within the WEHY model.
- Figure 6. Depiction of subsurface stormflow process.

LIST OF TABLES

Table 1 – Model Components for Butte County Watershed Modeling

Table 2 – Prioritized Water Resources Modeling Studies for Butte County
