

Where would you be willing to make a change to your position?

- If submit evidence no contamination and public health risk
- If make process user friendly
- Education and outreach
- Be able to fund oversight
- Conservation of existing resources
- Show me the science on biosolid risks
- Reasonable regulatory oversight-mutual benefit for common good (willing to accept more regs)
- Show me the science #2
- Willing to change with more info
- Establish tax district or based upon zoning
- De-reg as much as possible and still be protective of public health and environment
- If we could guarantee systems that compensated for “human factor”
- OK GW under certain conditions including lots of public education
- Be willing to accept a code that works for all
- Accept composting toilets if including a maintenance contract
- Accept reg if initially rotating testing system to assure proper operation and then if alls going well then gradually less regs
- Could accept reg of GW and Comp toilets if effluent from current sewage treatment plants were subject to same level of scrutiny for chems, pharmaceuticals, etc.
- Change Title 27
- Continue to work on modifying 16A
- Easy standardized systems and affordable
- State agencies should work together
- Grey water as irrigation
- NO permits to YES permits
- Maintenance codes/contracts NO to YES
- Not budging on regulations, tiered permitting, not letting people “run loose”
