- ❖ Public Works 538.7681
- ❖ CAL Fire Inspection 538.6226

Revised 04/26/2021

NOTICE

All property owners of fire damaged/destroyed structures must participate in one of the two Debris Removal programs – The Flow chart below depicts the steps for either of those programs. Regardless of the program chosen, the owner must also complete the Environmental Health (EH) process for well and septic clearance.

CAL Recycle – Right of Entry Program
CAL Recycle will contact property owners when the property is scheduled for cleanup

Stake out and secure the location of the existing Septic System. Parcel status of “Property Clean-up Complete” (which includes debris removal and final clean up documentation approval), as well as enrollment in a Tree Removal Program if your property is eligible, will authorize issuance of building and septic system repair permits (if necessary).

Alternative Debris Removal Program
Once an alternative work plan has been approved by EH the owners contractor may begin debris removal

Use an existing Septic System

Owner has existing system evaluated by a County certified wastewater professional. A **North Complex Fire** septic inspection form must be completed and turned into EH. County records must show that the septic system was built for the same number of bedrooms proposed for the re-build.

EXISTING SEPTIC NEW SEPTIC

Construct a new Septic System

Owner applies with EH for a septic replacement permit. The replacement system must be sized for the same number of bedrooms being applied for the rebuild.

SEPTIC EVALUATION FAIL

EVALUATION PASS

Will the structure be served by a Public Water System or Private Well?

PUBLIC WATER

PRIVATE WELL

Well Water Sampling may be required. This process can be completed by the Owner:
➢ Bacteriological Testing required if well head was damaged or compromised.

Sample results submitted to and approved by EH.

If not previously submitted, the owner must submit building plans for plan check

Land use agencies provide Building permit review and clearance based on criteria approved.

Construction may begin on the building. Inspections must be scheduled as required

Other permit conditions must be completed such as driveway aprons, erosion control, utility connections, etc.

Obtain final approvals from all required agencies

Once the owner has been issued a Certificate of Occupancy... Move in !
